Using MegaStat on a Mac

This version of MegaStat will work with Excel 2011 on a Mac running OS X. It will not work with Excel 2008 since that version of Excel did not support add-ins.

After the installation and initial setup, MegaStat will appear on Excel's main menu bar as shown below:

MegaStat for the Mac has all of the features of the Windows version and works the same way. The design and appearance of some of the dialog boxes will be slightly different from the Windows version, but the functionality is the same and you can use the MegaStat User's Guide.

MegaStat installation

Download the installation program (MegaStat.pkg) and run it. The following screen will appear.
